

Unveiling yield at
anytime anywhere.

GrainiGo™

Today, maize is one of the most consumed food crops in the world. And not only for human nutrition but also for feed. But how can we ensure that the best quality products end up on our plates?

Maize analysis through your mobile device

Analyze the quality and yield from a sample of kernels:
Bühler's new quality control tool GrainiGo brings you the advantages of instant quality analysis and Internet of Things. GrainiGo is a low-cost solution for reliable and consistent quality assurance. It's portable and easy to use, allowing you to deploy it at any point in your production through image analysis.

Benefits

- Fast & objective results
- Increased quality control and traceability
- Portable design and easy to use
